

## Defend Against Advanced Email Threats

Avoid becoming the next cyber attack victim

Email continues to be the most popular cyber attack surface. Research shows that 91% of cyber attacks starts with an email, of which, 80% reported are spear-phishing attacks. Here are some of the ways you can help defend against these email threats.

### Our Advanced Email Security Service Offers:

#### Threat Prevention

Stop email threats from getting through by combining email gateway defences and API-based inbox defence.

#### Threat Detection

Identify suspicious activity and email threats already inside your Office 365 email environment before they can cause damage.

#### Incident Response

Limit the impact of any threats that reach users with automated response and fast recovery tools. Backup your important Office 365 email and data to recover easily from malware attacks or lost data.

Our Advanced Email Security Service offers the most comprehensive email protection against all email threat types, from spam and ransomware, to complex threats such as spear phishing, business email compromise, and account takeover.

Today's sophisticated cyberattacks are highly targeted and designed to bypass traditional email security gateways. An advanced email security services is no longer a 'nice to have'. Fortunately, we can help.

### Services Include:

#### Prevention:

- **Email gateway protection** that stops spam and malware.
- Cloud-based **Advanced Threat Protection** service to defend against zero-day attacks.
